Integrative Project 1

Juan M. Reyes

February 2022

Functional Requirements

Req1. Register user. The program must allow users to register themselves through a button in log in screen. The necessary information to register a user is the following, each user has a username, password, first name, last name, birthdate.

Req2. Log in. The program mut to be able to validate if a user exists and give him access through a log in screen.

Req3. Display user information. The program needs to display the user information using a table where each column corresponds to a user attribute. This table will be displayed to the user after checking his existence through the log in screen.

Req4. Log out. The program must allow the user to go out of the table user's information screen through a button, this button takes the user to log in screen.
